Add a topic: Page will display a form that will enable the user to post a new topic.

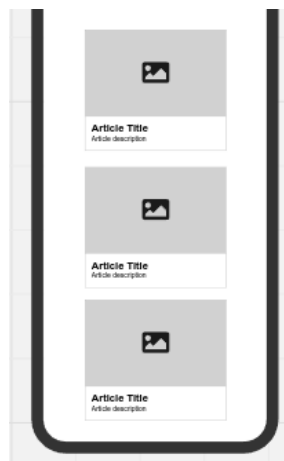

Components breakdown:

Header component: Will contain the navigation menu, user and logo.

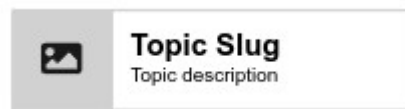

Main content component: Will be a “container” that will be used to render the main content of the page. The idea is that container will render other sub-components like (show all articles, article page by id, post an article, post a comment).

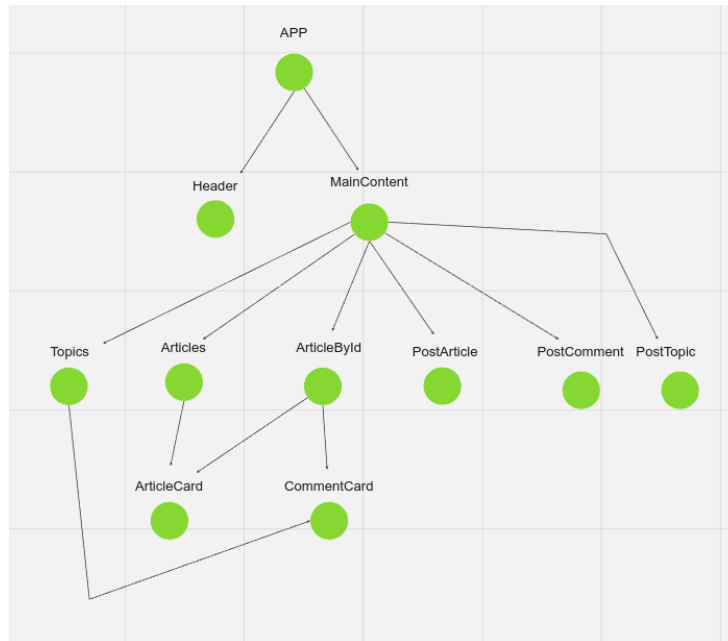

ArticleCard component: Re-usable component that will display an article card.

CommentCard component: Re-usable component that will display an comment / topic card.
